

Emergency Preparedness (EP) Frequently Asked Question (FAQ) Report

Sort by FAQ Identification (ID) Number

Each operating nuclear power plant is required to include in its emergency plans a standard emergency classification and EAL scheme. An EAL is a pre-determined, site-specific, observable threshold for a plant condition that places the plant in an emergency class. The NRC is using an FAQ process to assist licensees with EAL development. As such, a practical knowledge of existing EAL regulatory guidance is required in applying any EP FAQ response.

The EP FAQ process is intended to clarify the NRC staff's interpretation of existing EAL regulatory guidance issued or endorsed by NRC, and will not be used to create new regulatory positions or guidance. Issues involving safeguards information are not considered under the EP FAQ process.
